

ENVIRONMENTAL POLICY

JSC Belaruskali is one of the largest producers and exporters of potassium chloride in the world. We help people all over the globe to grow food and ensure food security through our production. As a leading company in the mining and chemical industry in Belarus, we understand that climate change, population growth, limited resources, and industrial pollution are all challenges that need to be addressed.

We have set several environmental goals for ourselves, including minimizing the negative impact of our production on the environment, using our mineral resources efficiently, and ensuring the safety of our operations. These goals are essential for us to continue providing high-quality products while protecting the environment for future generations.

Belaruskali's main environmental goals are to minimize the negative impact of its production on the environment, to rationally use its unique mineral resources and other types of resources, and to ensure environmental safety.

The implementation of the above objectives is achieved through the application of the following principles: compliance with mandatory standards - ensuring compliance of activities with the legislation of the Republic of Belarus and other mandatory regulatory requirements related to environmental aspects and risks of the enterprise;

sustainable development - improving production efficiency, introducing and applying scientific and technological advances, advanced technologies, equipment, and materials, as well as implementing production process management systems with minimal negative environmental impacts and reduced environmental risks;

prioritization of preventive measures over remedial measures - prioritizing measures to prevent negative consequences rather than measures to eliminate them;

systematic management of environmental activities - ensuring the operation of an environmental management system in accordance with the requirements of STB ISO 14001 Standard;

continuous improvement is the ongoing process of enhancing the environmental management system and indicators, reducing environmental risks, conserving resources and energy, minimizing emissions of pollutants and greenhouse gases, protecting water resources, minimizing waste generation, and compensating for the negative impacts of mining on the landscape and infrastructure;

interaction with stakeholders and transparency - maintaining an open dialogue with all interested parties on the company's environmental policies and providing relevant information about its environmental initiatives.

Management of JSC Belaruskali takes responsibility for creating the necessary conditions and providing resources to ensure the implementation of the company's environmental policy. The Company also encourages other industrial enterprises, organizations, partners, contractors, and counterparties to work together to protect the environment and ensure environmental safety, in order to preserve a healthy environment for current and future generations.

Director General
JSC Belaruskali
